Adenium multiflorum is small, succulent tree native to central and eastern Southern Africa. Like other succulent members of the family Apocynaceae, A. multiflorum has a milky latex with toxic alkaloids, specifically Cardiac glycosides. This latex is used as an arrow poison and as a fish stunning poison.. It is sometimes treated as a variety or subspecies of Adenium obesum.

The Cimba, also spelled Tjimba, are a remote, Herero-speaking hunter-gatherer people of the Kaokoveld desert in northwest Namibia and southwest Angola, in the mountain ranges bordering the Kunene River. They continue to use stone tools, and use Adenium boehmianum to poison their arrows.. Their Herero neighbors portray them as Herero who have lost their cattle and are therefore impoverished, but ...

Traditional herbal remedies used in the management of ...

Dear community I've been reading this book by H.D Neuwinger called "African Ethnobotany - Poisons and Drugs", which is quite a tome, with a wealth of information on a great variety of plants and their use as poisons and drugs. The pharmacology and chemistry sections of this book are especially informative.

9783826100772: African Ethnobotany: Poisons and Drugs ...

It concerns African hunting poisons, and covers plants used as ingredients of both poisons and drugs. There is a brief introduction which discusses poisoned weapons, poison preparation, plant sources and their active principles, and animal poisons.

Tjimba people - Wikipedia

Description. Aloe buettneri is a succulent plant with thick and fleshy leaves arranged in a rosette. The leaves grow to about 40–80 cm long, 8–9 cm broad. The leaves are rimmed by alternating paired and solitary teeth and come together to form an underground bulb-like base making the plant appear stemless.
