Flight instruments are the instruments in the cockpit of an aircraft that provide the pilot with data about the flight situation of that aircraft, such as altitude, airspeed, vertical speed, heading and much more other crucial information in flight. They improve safety by allowing the pilot to fly the aircraft in level flight, and make turns, without a reference outside the aircraft such as the horizon. Visual flight rules require an airspeed indicator, an altimeter, and a compass or other suita

radar, autopilots, and aircraft stabilization systems. Redundant sensors are used for reliability.

Instrumentation - Wikipedia  
This book is intended for the undergraduates studying Aircraft Instrumentation and Avionic Systems. This happens to be a core subject of various branches of engineering such as: Instrumentation Technology, Electronics Instrumentation Engineering, Aeronautical Engineering as well as Aerospace Engineering.
