### Synaptic transmission - A\* Biology

The human immunodeficiency virus (HIV) structure can be seen below: Following infection, the HIV is transported around in the blood until it attaches to a CD4 protein on the helper T cells. The HIV protein capsule then fuses with the helper T cell membrane, enabling the RNA and enzymes from HIV to enter.

THE LIGHT-DEPENDENT STAGE OF PHOTOSYNTHESIS The two photosystems are involved in non-cyclic photophosphorylation, PSII comes before PSI. The photosystems are found in the thylakoid membranes and are linked by electron carriers (proteins that transfer electrons). The photosystems and electron carriers form an electron transport chain. Light energy is absorbed by PSII and this excites electrons ...
