Statistics and Probability | Khan Academy

The 'average', 'maximum' and 'minimum' are all statistics. Note, summary statistics of a sample are often used as estimates for the population at large - for instance when you are told 'the average man has 1.8 children' that result was found in a sample of men - it is usually impossible to check every man.

Quiz: Introduction to Statistics

2 + ... + a. n. n (1.1) The mean is sensitive to any change in value, unlike the median and mode, where a change to an extreme (in the case of a median) or uncommon (in the case of a mode) value usually has no effect. One disadvantage of the mean is that a small number of extreme values can distort its value.

called parameters. Inferential statistics can be used to generalize the findings from sample data to a broader population. Completing this unit should take you approximately 22 hours.

MAT 110 Basic Statistics Lesson 1 (video 1).mp4

Statistics is the discipline that concerns the collection, organization, displaying, analysis, interpretation and presentation of data. In applying statistics to a scientific, industrial, or social problem, it is conventional to begin with a statistical population or a statistical model to be studied. Populations can be diverse groups of people or objects such as "all people living in a country" or "every atom composing a crystal".
