~~Module 1: Solar thermal—solar hot
water heating—CIBSE ...~~

The design heating load is determined for a particular winter design ambient temperature. The type of heat emitter is decided (radiators, underfloor heating, fan coil, etc.), which determines the water temperature required. Underfloor heating and fan coils can operate at water temperatures of 35°C, but radiators will need water at least at to ...

~~CIBSE—Building Services Knowledge~~

This Guide is to be read in conjunction with the Domestic Heating Design Guide which covers the main elements of domestic heating system design. The requirements of underfloor heating and the modifications which have to be made to the normal design process to allow for the specific attributes of floor heating are covered in this publication.
