### Compounds Their

Butane has the empirical formula  $C_2H_5$ , but it contains two  $C_2H_5$  formula units, giving a molecular formula of  $C_4H_{10}$ .

Because ionic compounds do not contain discrete molecules, empirical formulas are used to indicate their compositions. All compounds, whether ionic or covalent, must be electrically neutral.

For many formulas, however, more than one compound is possible. For example, the CRC Handbook lists two compounds having the formula  $C_2H_6O$ , three compounds having the formula  $C_2H_2Cl_2$ , and twenty-one compounds having the formula  $C_4H_{10}O_2$ . Each compound is a different substance,
