**Diagnostic Endosonography A Case Based Approach [EBOOK]**  
This case illustrates two things. First, EUS is an imaging modality that looks at the same anatomy based on a reflection-based algorithm, whereas CT evaluates tissue based on its transmission characteristics. Therefore, the same pathology can be obvious on EUS and close to invisible on CT or vice versa.

An anal endosonography in the right anterior direction revealed a sharply defined lesion, 17 x 14 mm in diameter, with high echoic enhancement at its center. The lesion was located along the edge of the external anal sphincter but did not involve it. Based on these endosonographic findings, the tumor was not considered to be an abscess or fistula.
