KISCO (Kyung in Synthetic Corporation) - Reactive dyes ...

Reactive dyes are highly colored substances having a chromophore group like azo, anthraquinone, etc., and a substituent, e.g. vinylsulfone, chlorotriazine which attach to the fibers by forming a covalent bond during the dyeing process. Reactive dyes are used mostly for the coloration of cellulosic fibers such as cotton.

A new approach for the removal of unfixed dyes from ...

Dyeing in textiles is a process in which color is transferred to a finished textile or textile material (like fibers and yarns) to add permanent and long-lasting color. It can be done by hand or ...

What is Dyeing in Textiles? - Video & Lesson Transcript ...

Natural fibers—such as cotton, linen, silk, and wool—take dye much better than synthetics do. Dyeing is as much an art as a science, so don't hesitate to experiment. For example, we like combining liquid dyes to come up with our own colors. Modify this technique for items other than fabric, immersing them in the dye and taking note of how each item takes the color.
