Electronic spark advance - how does it work Generally speaking our engines are timed to provide spark at or near 4 degrees before TDC at idle or for starting, while 28 degrees is typical at maximum advance prior to TDC.

### **Electronic spark advance - how does it work - RCU Forums**

Electronic Spark Advance Operation For maximum engine output efficiency, the air/fuel mixture must be ignited so that maximum combustion pressure occurs approximately 10'-15' after TDC. As engine RPM increases, there is less time for the mixture to complete its combustion at the proper time because the piston is traveling faster.
