Presentation. For more than forty years, string theory has been able to impact in the development of several fields of mathematics. K- theory, algebraic and differential geometry, topology, infinite dimensional analysis, representation theory and derived categories, to mention a few, have been profoundly influenced by “stringy” ideas such as

*Geometrical Methods In The Theory*  
The Geometrical Method is the style of proof (also called “demonstration”) that was used in Euclid’s proofs in geometry, and that was used in philosophy in Spinoza’s proofs in his Ethics. The term appeared first in 16 th century Europe when mathematics was on an upswing due to the new science of mechanics.
