$L_{Object}$  = Luminance of the object.  $L_{Background}$  = Luminance of the background. If we use the luminance values shown in the upper portion of the figure we can calculate that the lower portion of the cylinder, where the roadway is the background, has a contrast of  $(1-22)/22 = -0.95$ , with the negative value denoting that it is negative contrast.

Nonimaging optics (also called anidolic optics) is the branch of optics concerned with the optimal transfer of light radiation between a source and a target. Unlike traditional imaging optics, the techniques involved do not attempt to form an image of the source; instead an optimized optical system for optimal radiative transfer from a source to a target is desired.

Almost 60 years have passed since the first demonstration of a laser in 1960. After the initial spark of interest, lasers were for a while categorized as “a solution waiting for a problem,” but bit by bit, the range of their applications has expanded to encompass fields as diverse as DNA sequencing, consumer electronics manufacturing, or freezing the motion of electrons around atoms.

The RX identifier means this pistol comes with a SIG Sauer Electro-Optics Romeo 1 reflex sight. The top of the slide has been machined to position this sight as low as possible, and taller than normal three-dot Tritium suppressor-like sights are fitted to the slide to allow for their use in case the shooter prefers, or in case the optic might fail.

A gobo is a stencil or template placed inside or in front of a light source to control the shape of the emitted light. Lighting designers typically use them with stage lighting instruments to manipulate the shape of the light cast over a space or object—for example to produce a pattern of leaves on a stage floor. Sources The term "gobo" has come to sometimes refer to any device that produces ...
