technique used to identify potential hazards and functional flaws in existing or planned plant systems. Its purpose is to reduce risk and ensure the safety of workers in plant environments. It is primarily used to study complex operational hazards and functions in chemical processing plants but is also used in nuclear, water, sewage, and treatment plants.

What is HAZOP?

HAZOP means Hazard and Operability Study. It is part of a domain known as process safety management. HAZOP Analysis is a popular hazard identification and risk assessment technique. The HAZOP Study method was first used in the multinational chemical company known as Imperial Chemical Industries (ICI for short).
