Landslide in the Thick Loess Terrain of North-West China ...

A lavishly illustrated study of landslides and debris flows on the Loess Plateau of north-central China where dense rural population and human activity has greatly increased landslide hazard. The Loess Plateau lies in the middle reaches of the Yellow River and there are a number of cities housing more than a million people. Landslides are triggered by heavy rain storms and earthquakes have been a ...

Landslides In The Thick Loess

On 15 March 2019, a fatal deep-seated landslide occurred at the village of Zaoling in Xiangning County of Shanxi Province, China. Extending to an area of about 120 m by 85 m, with an estimated displaced mass volume of 72,000 m³, the landslide left 20 people dead, 13 injured, and 8 buildings destroyed. There were no precursory signals prior to the event, and usual triggering mechanisms for a ...

The initiation of loess landslides is a common engineering problem during the construction of the expressway or other engineering works in the Loess Plateau of China. The engineers and researchers should devote themselves to the prevention of the initiation of loess landslides. This study focused on a loess landslide which was induced during the construction of an expressway in Shanxi Province ...
