Life In A Coral Reef

Beneath the surface of the ocean a beautiful coral reef "built of limestone from tiny sea animals" is teeming with life and awash with vibrant colors. Fish can be seen swimming among the reef, but there is more to it than meets the eye in the Great Barrier Reef off the coast of Australia.

Life on the Coral Reef.

The world of the coral reef is one of the most diverse ecosystems on our planet. The sheer number of life forms on the reef rivals even that of the tropical rain forests. Built over thousands of years by tiny calcium-producing organisms, the reefs are a haven for countless thousands of life forms, some of which seem totally

As in all natural environments, the life in a coral reef may change, and that change may follow a pattern: ecological succession. Succession may be observed by identifying the species in an environment, and by taking a census of them within a given area.

The process of ecological succession in a coral

The world of a coral reef community is one of color, bizarre-looking life forms and intrigue. The moment you place your face in the water and gaze downward in a typical coral reef setting, it is all but impossible not to feel an almost overwhelming sense of wonderment. Everywhere you look, brilliantly colored fishes catch your eye.
