Understanding human body temperature in infrared readings

Abstract. Two types of infrared spectra observed during the formation of ammonium carbamate from the reaction of NH_3 and CO_2 in the solid state at low temperatures have been

Download Free Low Temperature Infrared Study

re-examined. These spectra had been assigned previously to amorphous and crystalline ammonium carbamate but the present data suggest their origins to be and its unstable precursor ($\text{NH}_3 \cdot 2 \text{CO}_2$ in which CO_2 is bent.
