Macro photography tips. First things first, before any macro photography advice will be useful, you'll need a macro lens. While most lenses shoot at a ratio of 1:2.8 and greater, macro lenses shoot at a 1:1 ratio and can focus only within the macro range of about 12 inches or fewer — essential for the super-sharp focus needed to make the ...

Macro photography tips for beginners | Adobe

Macro photography (or photomacrography or macrography, and sometimes macrophotography), is extreme close-up photography, usually of very small subjects and living organisms like insects, in which the size of the subject in the photograph is greater than life size (though macrophotography technically refers to the art of making very large photographs). By the original definition, a macro ...

Macro photography - Wikipedia

In macro photography, Aperture Priority is a great go-to camera mode. This is because the aperture is the most important thing for you to think about. Whereas it's completely okay if your shutter speed (see below) fluctuates a bit.

The Best Settings for Macro Photography (Ultimate Guide)

With macro photography, the highest pixel density (most pixels per square millimeter of the sensor) is what determines the maximum detail you can get on your subject. The D850's large sensor has fewer pixels per millimeter than the crop-sensor D7500, despite having more total pixels. In many genres of photography, larger pixels - and more ...
