Numerical Solution of Singularly Perturbed Differential ...

682 Numerical Solution of Singularly Perturbed Differential-Difference Equations...: M. Adilaxmi et al. for singularly perturbed differential-difference equation with small shifts. Different numerical methods were proposed to solve singularly perturbed problems by Roberts [18], Bender and Orszag [1], O'Malley [12], and Miller et al. [10].

Numerical solution of singularly perturbed boundary value ...

The solution of these PDEs is extremely challenging when they has singularly perturbed behavior. In

# File Type PDF Numerical Solution Of Singularly Perturbed Problems Using

this paper, we discuss the numerical solutions of where is a small and strictly positive parameter called diffusion coefficient, is some two- or three-dimensional region.

## Numerical solution of singularly perturbed convection ...

In recent years, various numerical methods have been introduced and developed to solve the singularly perturbed differential equations such as the B-Spline with artificial viscosity , shooting method [ , , ], Lie-group shooting method for linear and nonlinear singularly perturbed BVPs [ , ], multiple shooting method , shooting method for linear and nonlinear boundary value problems ...

## Numerical solution of singularly perturbed delay ...

This paper presents a numerical method to solve singularly perturbed differential-difference equations. The solution of this problem exhibits layer or oscillatory behavior depending on the sign of the sum of the coefficients in reaction terms. A fourth-order exponentially fitted numerical scheme on uniform mesh is developed. The stability and convergence of the proposed method have been ...

## Numerical Solution of Singularly Perturbed Differential ...

This paper presents the application of Differential Quadrature Method (DQM) for finding the numerical solution of singularly perturbed two point singular boundary value problems. The DQM is an efficient discretization technique in solving initial and/or boundary value problems accurately using a considerably small number of grid points. This method is based on the approximation of the ...

## Numerical solution of sigilarly perturbed parabolic ...

The numerical results show that the proposed algorithm is a robust and accurate procedure for solving singularly perturbed convection delay problems. Furthermore, the obtained accuracy for the

# File Type PDF Numerical Solution Of Singularly Perturbed Problems Using

solutions using SADE is much better than results obtained using some others algorithms.

## ROBUST SOLUTION OF SINGULARLY PERTURBED PROBLEMS USING ...

In this paper, a quadrature technique is employed for the solution of singularly perturbed delay differential equation. A first-order neutral type delay differential equation is achieved, which is asymptotically equivalent to the given singularly perturbed delay differential equation.

## Numerical Solution Of Singularly Perturbed

This paper discusses the numerical solution of linear 1-D singularly perturbed parabolic convection-diffusion-reaction problems with two small parameters using a moving mesh-adaptive algorithm which adapts meshes to boundary layers. The meshes are generated by the equidistribution of a special positive monitor function.

## Numerical solution of time-fractional singularly perturbed ...

In this paper, we have presented the Differential Quadrature Method (DQM) for finding the numerical solution of boundary-value problems for a singularly perturbed differential-difference equation of mixed type, i.e., containing both terms having a negative shift and terms having a positive shift. Such problems are associated with expected first exit time problems of the membrane potential in ...

## Numerical Solution of Singularly Perturbed Convection ...

In this paper, a numerical solution of singularly perturbed BVPs (SPBVPs) using an optimal fitted one-step integration scheme via initial value method is present. The original second order SPBVP is replaced by an asymptotically approximate first order initial value singularly perturbed problem (IVSPP) and solved by using an optimal

## Numerical Solution of Quasilinear Singularly Perturbed ...

at boundary layer. Also, the exact solution of such problems usually is not found. For this reason, numerical algorithms are needed. In this study, difference scheme with exponential coefficients are presented for singularly perturbed nonlinear reaction diffusion problems with boundary layer. In constructing these schemes,

## Numerical Solution of Singularly Perturbed BVPs using an ...

the singularly perturbed problem is characterised by the presence of boundary or interior layers: narrow regions of the domain where the solution changes rapidly. The numerical solution of these problems is of significant mathematical interest.

## Numerical Solution of Singularly Perturbed Differential ...

This work is concerned with the development of a stable finite difference method (SFDM) for time-fractional singularly perturbed convection-diffusion problems with a delay in time. The fractional derivative is considered in the Caputo sense. The SFDM is constructed based on the stability of the analytical solution.

## Numerical solution of singularly perturbed convection ...

Numerical solution of singularly perturbed parabolic problems by a local kernel-based method with an adaptive algorithm Hossein Ra eayanzadeh, ... singularly perturbed problems. In this work, a local kernel-based method is applied for solving singularly perturbed parabolic problems.

## Numerical Solutions of Singularly Perturbed Reaction ...

Many numerical methods have been developed for the solution of two layer boundary value problems, such as described in [4], [5], [6] and [7] for one parameter singularly perturbed boundary

# File Type PDF Numerical Solution Of Singularly Perturbed Problems Using

value ...

## (PDF) THE NUMERICAL SOLUTION OF SINGULARLY PERTURBED ...

In this paper, we discuss the numerical solution of singularly perturbed differential-difference equations exhibiting dual layer behavior. First the second order singularly perturbed differential-difference equation is replaced by an asymptotically equivalent second order singularly perturbed ordinary differential equation. Then, second order stable central difference scheme has been applied ...

## Numerical Solution of Singularly Perturbed Two-Point ...

The numerical solution of singularly perturbed convection-diffusion-reaction is an important problem in many applications [20, 21]. The presence of small perturbation parameters makes the numerical analysis difficult for these problems, see e.g. [6, 22, 27, 28].

## Exponentially Fitted Numerical Method for Singularly ...

On the non-uniform grid of the uniformly distributed arc-length monitor function, the solution of the simple upwind scheme is obtained. It is proved that the adaptive simple upwind scheme based on the principle of equidistribution has uniform convergence for small perturbation parameters.
