Using the equation amount (1.31 g Cu), the percent Cu in the Brass sample is 90.2%.

Conclusion: In this experiment, we found, successfully, the mass percent of copper in brass. It is surprising that it took so many steps, using very exotic methods, in order to get a seemingly simple answer.

If the zinc is not fully exposed, not all of it reacts, thus turning the solution slightly yellow. If not all zinc reacts. the final mass would be higher. This can be solved by cutting the penny directly in half. If you shaved the edge of the penny, this will not fully expose the zinc and it will also make the mass of the copper smaller.
