Ferrotec Global - Cryotechnology, Polycold | Ferrotec Global

Polycold manufacture a complete line of closed-loop cryogenic refrigeration systems for vacuum deposition, process heat transfer, and other applications. They offer complete solutions for cooling applications, with heat removal from .5 watts to 4200 watts, and cooling to temperatures as low as -203°C.

Gas Chiller Systems | Portable Chillers

SELF-CONTAINED RECIRCULATING CHILLERS Recirculate Fluid from an Internal Tank. Closed-Loop coolers recirculate coolant from a tank mounted in the cooler, through a sealed coolant loop and heat load (spindle) and back to the tank. The tank, pump, and evaporator are all in the cooler. Coolant is added to the tank through a filler/breather port.

Polycold PGCL Closed Loop Gas Chillers - Brooks Automation

Polycold® Systems Cooling Products, ... Gas circulating in the secondary loop of the 2XCL closed loop gas chiller is cooled in the gas chiller. The temperature of the gas leaving the gas chiller can reach temperatures of -100oC. The chilled gas is recirculated by a secondary gas compressor. The customer-installed lines connecting the gas ...

Cryochillers - Edwards Vacuum

• Continuous Cooling • Heat Removal to 810 Watts Polycold Gas Chillers cool dry gases (such as nitrogen, argon or air) from ambient to cryogenic temperature without precooling. The Gas Chiller is a closed-loop refrigeration system which cools a gas stream using a refrigerant to gas tube-in-tube heat exchanger. The gas stream is non-recirculating. SEMICONDUCTOR PRODUCTS GROUP Features

POLYCOLD MAXCOOL 4000 H CRYOCHILLER

Thermonics gas chiller systems are designed for cooling gasses (nitrogen, argon) and clean-dry-air (CDA) for a variety of process cooling applications. The gas chillers can be configured with auto-cascade or cryogenic cooling technologies for low and ultra-low temperature cooling.

Polycold Closed Loop Gas Chiller

Polycold® Systems Cooling Products, ... Gas circulating in the secondary loop of the 1XCL closed loop gas chiller is cooled in the gas chiller. The temperature of the gas leaving the gas chiller can reach temperatures of -100oC. The chilled gas is recirculated by a secondary gas compressor. The customer-installed lines connecting the gas ...

Used Polycold 2XCL-3 for sale by Bid Service, LLC | used ...

Polycold ® MaxCool 2500 L Cryochiller The Polycold MaxCool 2500 L cryochiller is a closed loop cryogenic refrigeration system that provides up to 2,500 watts of cooling. It can be used to capture water vapor and other condensable substances by freezing them onto a cold surface such as a cryocoil or chevron baffl e. TheMaxCool

POLYCOLD CLOSED LOOP GAS CHILLER - brooks.com

A closed-loop refrigeration system that cools a non-recirculating gas stream Edwards Polycold® PGC Gas Chiller requires no pre-cooling This Gas Chiller cools compressed dry gases, such as nitrogen, argon or air, from ambient to cryogenic temperature without pre-cooling.

Polycold Systems - Megatech Limited

Telemark cryochillers provide efficient closed-loop cryogenic refrigeration for water vapor pumping with cooling capacities from 1200W to 3600W. Telemark cryochillers support state of the art communications and full system integration. The digital control package operates at 24V and contains a battery backup.

PGC Gas Chillers - Edwards Vacuum

Polycold PGCL Closed-Loop Gas Chiller Models Covered: PGCL-1 630 Watt Cooling Capacity PGCL-2 800 Watt Cooling Capacity . 7-1 7. Troubleshooting and Repair Overview This section helps you troubleshoot and correct problems with the PGCL. Engineering drawings are included in the appendix to aid you in troubleshooting the PGCL-1 ...

LTIS_PRODUCT_Telemark_Polycold - LTIS ENGINEERING PTE LTD ...

The Brooks Polycold® Gas Chillers cool compressed dry gases, such as nitrogen, argon or air, from ambient to cryogenic temperature without pre-cooling. PGC Gas Chillers are closed-loop refrigeration systems that cool a non-recirculating gas stream using a refrigerant to gas tube-in-tube heat exchanger.

Polycold PGCL Closed- Loop Gas Chiller

Polycold cryochillers are closed loop cryogenic refrigeration systems that provide up to 4,000 watts of cooling. They can be used to capture water vapor and other condensable substances within a vacuum process to significantly improve both the time and quality of vacuum creation.

Polycold PGC-152 Gas Chiller - T-Systems

Polycold Gas Chiller cool dry gases (such as nitrogen, argon or air) from ambient to cryogenic temperature without precooling. The Gas Chiller is a closed-loop refrigeration system which cools a gas stream using a refrigerant to gas tube-in-tube heat exchanger. The gas stream is non-recirculating.

POLYCOLD CLOSED LOOP GAS CHILLER - brooks.com

Polycold® Closed Loop Gas Chillers incorporate both a closed loop refrigerating system and a recirculating gas coolant system, which cools a gas stream using highly efficient refrigerant heat exchangers. The gas stream is recirculating, using any inert dry gas (such as nitrogen, helium, argon or dry air) as the coolant medium. Chilled gas recirculation offers easy serviceability and

Ask for a quote on a Used Business & Industrial Polycold Closed Loop Gas Chiller 2XCL Misc. Industrial Equipment from Outback Equipment Company at used-line.com today

Business & Industrial Polycold Closed Loop Gas Chiller 2XCL

Polycold MaxCool Cryochillers are closed loop cryogenic refrigeration systems that provide up to 2,500 watts or 4,000 watts of cooling, respectively. These cryochillers can be used to capture water vapor and other condensable substances by freezing them onto a cold surface such as a Meissner coil (cryocoil) or chevron baffle.

CTI Polycold | AVT Services, Vacuum & Cryogenics Specialists

Polycold Closed Loop Gas Chiller. Can Be Used For Substrate Cooling In A Broad Range Of Applications. Recirculates Compressed Dry Gas. 480v, 3ph, 50/60 Hz, 12a.

Products and Services — JB Technical
