Protein Synthesis Lab-- A paper-scissor-tape activity used to help students envision the process of protein synthesis -- transcription, post-transcriptional processing, translation, and the effect of mutations. Replication Activity-- although we end up with a poster, the goal of this activity is to re-enact replication.

In the Protein Synthesis lab, you will learn about the difference between protein synthesis in prokaryote (using *E. coli*) and eukaryote (using CHO cells). Prepare recombinant Erythropoietin and use the mass spectrometer. Your first task in the lab will be to prepare recombinant Erythropoietin that is transfected into *E. coli* and CHO cells.

Protein synthesis Introduction Translation or protein synthesis is a central process of central dogma of molecular biology. It deals with production of proteins or chains of amino acids by making use of a mRNA as a template, ribosomes as protein synthesizing machinery and tRNA's as carriers of amino acids during the translation process Living cells devote about 90 % of their chemical energy ...

The order of the amino acids in the protein, therefore, is specified by the mRNA, which in turn is transcribed from the DNA. Objectives In this activity you will: 1. Follow the steps of protein synthesis. 2. Translate the genetic code for specific amino acids. 3. Use paper models to simulate protein synthesis. Materials

Protein synthesis is the process of transferring information from a gene to a protein. DNA (Deoxyribonucleic acid) is made up of four main parts of adenine, thymine, guanine, and cytosine, and RNA (Ribonucleic acid) is made up of adenine, uracil, guanine, and cytosine. DNA is a double, helical nuc
