If the Z-transform of a signal or the transfer function of a system is defined on the unit circle then the discrete-time Fourier transform (DTFT) of the signal or the frequency response of the system are obtained. Duality in time and in frequency is used otherwise to obtain DTFTs of signals and systems.

Introduction to Signals and Systems
More seriously, signals are functions of time (continuous-time signals) or sequences in time (discrete-time signals) that presumably represent quantities of interest. Systems are operators that accept a given signal (the input signal) and produce a new signal (the output signal). Of course, this is an abstraction of the processing of a signal.
