Spray Gun Troubleshooting And Preventive Maintenance Guide

To do this adjust the nob at the back of your spray gun (located just beneath the connection with the air hose) and tighten it until the trigger cannot be pulled at all (Remember: righty tighty, lefty loosey). With no cup of spray tan solution in the gun, turn the machine on and begin "shooting" air through the spray gun.

The gun stops spraying Fundamentally, a spray gun needs both air and fluid to work. It is therefore imperative to check first if there is paint supply and if the air compressor is working. While these may seem very basic, it does happen that the cup runs out of paint or that the air compressor gets turned off.

Paint Sprayer Troubleshooting - Mark's Spray Guns

Spray gun cleaning and maintenance are an essential part of the paint application process. Professional cleaning on a regular basis prevents coating flaws resulting from contaminated nozzle components to ensure perfect results at all times, and it helps extend the lifetime of the spray gun.

Practical Guide: Spray Gun Maintenance - SATA

Hold the gun perpendicular to the surface whenever possible to reduce the chance of uneven paint coverage. Tilting the gun either up or down will produce a heavy build-up of paint on the top or bottom of the spray pattern. Arcing the gun causes a heavy coverage of paint on the left and right side of the pattern.
