~~Anatomy of the Urinary System~~

~~Urinary System. The urinary system consists of the kidneys, ureters, urinary bladder, and urethra. The kidneys filter the blood to remove wastes and produce urine. The ureters, urinary bladder, and urethra together form the urinary tract, which acts as a plumbing system to drain urine from the kidneys, store it, and then release it during urination.~~

~~The Renal System At A~~

~~Renal system, in humans, organ system that includes the kidneys, where urine is produced, and the ureters, bladder, and urethra for the passage, storage, and voiding of urine. In many respects the human excretory, or urinary, system resembles those of other mammalian species, but it has its own unique structural and functional characteristics.~~

~~Urinary System, Part 2: Crash Course A&P #39~~

~~The organs, tubes, muscles, and nerves that work together to create, store, and carry urine are the urinary system. The urinary system includes two kidneys, two ureters, the bladder, two sphincter muscles, and the urethra.~~

~~The urinary system, also known as the renal system or urinary tract, consists of the kidneys, ureters, bladder, and the urethra. The purpose of the urinary system is to eliminate waste from the body, regulate blood volume and blood pressure, control levels of electrolytes and metabolites, and regulate blood pH.~~

~~renal system | Definition, Function, Diagram, & Facts ...~~

~~Urinary System: Facts, Functions & Diseases. The urinary system, also known as the renal system, produces, stores and eliminates urine, the fluid waste excreted by the kidneys. The kidneys make urine by filtering wastes and extra water from blood. Urine travels from the kidneys through two thin tubes called ureters and fills the bladder.~~

~~Renal System - an overview | ScienceDirect Topics~~

~~The renal system is a group of organs that work together to produce, store, and release urine. Urine is the liquid waste material excreted from the body. The organs that work together in this system include the kidneys, bladder, ureters, and urethra. It is also known as the urinary or the excretory system.~~

~~Renal system questions (practice) | Khan Academy~~

~~Urinary System Function. The main urinary system function is to filter the blood of excess water, salts, and waste products, temporarily store these within a reservoir, and intermittently expel these products from the body. Filtration, Reabsorption, and Secretion. Each kidney contains approximately one million nephrons. Nephrons play a crucial role in removing waste products and adjusting concentrations of water, ions and smaller molecules in the blood.~~
