Types and programming languages. [Benjamin C Pierce] -- A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute.

~~Types and Programming Languages, The MIT Press,~~

A thorough and accessible introduction to a range of key ideas in type systems for programming language. The study of type systems for programming languages now touches many areas of computer science, from language design and implementation to software engineering, network security, databases, and analysis of concurrent and distributed systems.

~~Types and Programming Languages (The MIT Press): Benjamin ...~~

Types and Programming Languages. Each chapter is accompanied by numerous exercises and solutions, as well as a running implementation, available via the Web. Dependencies between chapters are explicitly identified, allowing readers to choose a variety of paths through the material. The core topics include the untyped lambda-calculus,...

~~Types and Programming Languages~~

Types and Programming Languages. A comprehensive introduction to type systems and programming languages. A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute. The study of type systems--and of programming languages...

A type system is a syntactic method for automatically checking the absence of certain erroneous behaviors by classifying program phrases according to the kinds of values they compute. The study of type systems — and of programming languages from a...

~~Advanced Topics in Types and Programming Languages by ...~~

Recent work on dependent types in programming languages can be roughly divided into two streams: •designing languages with full dependent types (a.k.a. “doing it the hard way”) — e.g., Cayenne •controlling dependent types to ensure tractable typechecking (and good interaction with nontermination, effects, etc.) — e.g., Pfenning and Xi 33/89
