I have a grandfather clock with urgos works that stopped working some time ago after a move. I am now interested in getting it working again and have been researching online. I found an earlier question that was pretty much the problem I'm experiencing (doesn't chime and only the middle weight moves).

Urgos clock movement identification. Urgos Clock Movement units have identifications on the back plate of the unit itself. These movements are available new in only the floor clock models such as grandmother and grandfather clocks. This is the more involved way of getting to the correct new unit and takes some figuring out.

Have a urgos grandfather clock to restore. and put into good working order. Clock chime continues to chime thru the four. 15 minute quarters and then continues while the. strike starts and stops until the chime finally stops. The timing and setup is obviously incorrect. Rather than chiming at each quarter hour.

The movement is a UW32062B #1048829. in a grandfather case. I cleaned the clock in L&R 677 cleaner and rinsed in L &R clock lube and rinse, I did disassemble the movement and clean it disassembled. The verge seem tight as it is a self adjusting and it did not seem to loose, I have had Hermle units that had been oiled and they would slip and not work.
