Question: Ten persons are seated at random in a row. What is the probability that a particular couple will be seated together? My attempt: $9! 2! / 10! = \frac{1}{5}$, since there are $9!$ ways of sitting in pairs and $2!$ ways to arrange a couple.

Probability: People sitting in a row (linear arrangement ...

Similar to baby splits because of their close distance from one another, the side-by-side split is almost always made by fitting the ball in between the two pins left standing. A much rarer conversion of the split involves sliding one pin into the other. A similar split (4-5-7 or 5-6-10) should be made the same way.
